SYNTHESIS OF THE SCIENCE 2:

Floating Offshore Wind Development & Fisheries

Virtual Workshop Date: May 1st 2025

11:00am - 5:00pm Eastern Daylight Time

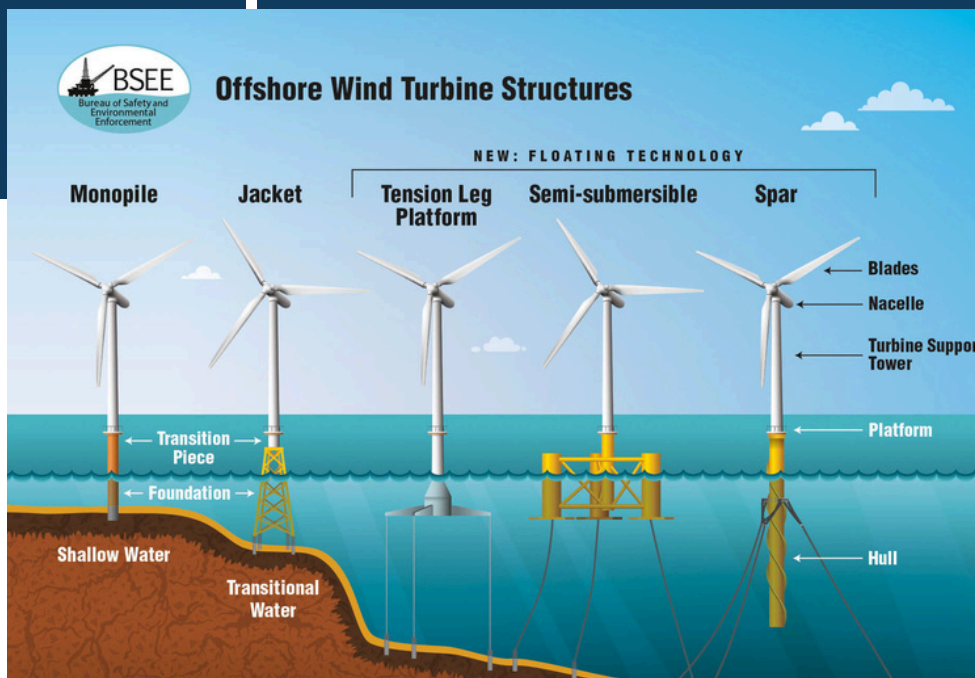

8:00am - 2:00pm Pacific Standard Time

RODA is organizing a continuation of the "Synthesis of the Science: Offshore Wind and Fisheries Interactions" project through hosting a virtual workshop on the interactions between fisheries floating wind energy technology. There is currently limited understanding of this emerging technology and the impacts it may have on commercial fisheries in the U.S. This workshop intends to achieve two goals:

1. Information sharing between the fishing industry and offshore wind technologists, engineers, and developers, including improved evaluation of the implications of the turbines, anchor system, and cables on fishing operations; and
2. Identify opportunities for fishing experts to partner in research and development for offshore wind technologies that may mitigate impacts to fishing.

TOPICS TO BE COVERED INCLUDE:

- Current Floating Offshore Wind Technology
- Expected Innovations in Floating Turbine Technology
- Fisheries Access in Floating Arrays
- Fisheries Management Implications
- Outstanding Research Needs
- Potential Mitigation Measures

Register for the virtual workshop:
